

2016 Annual Report: Homicides and Nonfatal Shootings in Milwaukee

Milwaukee Homicide Review Commission

Mission

Working together to reduce violence through innovative interagency collaboration.

Vision

A community where residents, community organizations, and law enforcement professionals work together to decrease violence.

AUTHORS

Salmafatima S Abadin, MPH

Violence Prevention

Mallory E O'Brien, PhD, MS

Director, Milwaukee Homicide Review Commission,
Assistant Professor, Medical College of Wisconsin

ACKNOWLEDGEMENTS

There are many individuals, agencies and organizations throughout the City of Milwaukee, the State, and across the nation that we must thank for their ongoing support and partnership. In particular, we want to acknowledge the members of the Executive Committee whose support and guidance have led the way to ensure the success of the Milwaukee Homicide Review Commission, and the City of Milwaukee Health Department's Office of Violence Prevention whose engagement and support over the years has been instrumental. We also thank community service providers, neighborhood associations, residents, law enforcement, representatives of the criminal justice system, and others who routinely participate in the review process. Without your knowledge and expertise, we would not be able to accomplish this important work.

Over the years, the Milwaukee Homicide Review Commission activities were funded, in part, by the Greater Milwaukee Foundation, US Department of Justice Project Safe Neighborhoods, Community-Oriented Policing and US Department of Justice, National Institutes of Justice.

SUGGESTED CITATION

Abadin, S and O'Brien, M. 2016 Milwaukee Homicide Review Commission Annual Report. Milwaukee Homicide Review Commission and City of Milwaukee Health Department, September 2017.

The Milwaukee Homicide Review Commission dedicates this report to the victims of homicides and nonfatal shootings in Milwaukee in 2016 and remembers the 139 lives lost due to violence.

A LETTER FROM THE DIRECTOR

Dear Milwaukee Community and Partners,

2016 marked the 12th year of the Milwaukee Homicide Review Commission and we undoubtedly remain committed to preventing violence with a public health approach in Milwaukee. The data indicate that violence continues to plague Milwaukee, and convening across systems and sectors as well as sharing data is critical to the reduction in violence. While I am proud of the work that the Commission has and will continue to do, I am ever conscious of the seriousness and complexity of violence and how it impacts our families, friends and community. We are hopeful and steadfast in fulfilling our mission and reaching toward a vision of a violence-free Milwaukee.

Relationships have always and will continue to be foundational to the success of the Milwaukee Homicide Review Commission. These relationships can and have changed over time but I want to express my gratitude and appreciation for our numerous partners over the past decade. The City, County, State, and Federal partners' ongoing commitment and the sense of urgency to prevent violence requires **all** of us to partner, collaborate and act with common goals and strategies. The Commission strives to align our work with other impactful work in our community to strengthen and improve our assets.

As we move through 2017, we are reminded that homicides are preventable but it takes time, a lot of hard work, and the participation of government, public and private agencies, and individuals working together to achieve that goal.

Thank you for the work that you do to keep Milwaukee safe and healthy.

Be well,

Mallory E O'Brien, MS, PhD

Director, Milwaukee Homicide Review Commission

THE MILWAUKEE HOMICIDE REVIEW COMMISSION

Established in January 2005 under the leadership of key elected and appointed officials, the Milwaukee Homicide Review Commission (MHRC) has been a central component to the City of Milwaukee's violence prevention efforts. Drawing on public health and criminal justice approaches, the Commission was designed to achieve the following goals:

- 1) Gain a better understanding of homicide through strategic problem analysis
- 2) Develop innovative and effective responses and prevention strategies
- 3) Help focus available prevention and intervention resources

A key assumption underlying the work of the MHRC is that *homicides are preventable*. With over a decade of collaboration and coordination, the MHRC strives to reduce homicides and non-fatal shootings through a multi-level, multi-disciplinary and multi-agency homicide review process, which includes independent data collection, analysis, and interpretation, case review and recommendations, and systems and policy change. At each review, partners participate in an intensive discussion and examination of homicide and nonfatal shooting incidents. Through this process, trends, gaps, assets, and deficits within existing systems, policies, practices, and programs designed to prevent and reduce violence are identified and recommendations are made to strengthen them.

The MHRC is comprised of public health professionals, law enforcement professionals, criminal justice professionals and community service providers who meet regularly to build and nurture relationships and exchange information and perspective regarding violent crimes to identify prevention strategies. This innovative, interagency collaboration helps to foster neighborhoods and communities where residents, organizations, and law enforcement work together to reduce violence.

The success of the MHRC has been driven by building trust and information sharing among agencies; providing opportunities to network and work together; acting on recommendations and having results; valuing and drawing on expertise from multiple disciplines and perspectives; and providing timely data on violence in our City.

During 2005-2007, the National Institute of Justice funded the Harvard School of Public Health to evaluate the MHRC. The impact evaluation revealed that the implementation of the MHRC interventions was associated with a 52% decrease in the monthly count of homicide in the intervention police districts, whereas the control police districts experienced a 9.2% decrease in homicide. These findings indicate that the MHRC adds value to understanding violence in our urban communities from a public health perspective.

KEY ACCOMPLISHMENTS

The Milwaukee Homicide Review Commission has had numerous accomplishments since its inception in 2005. In addition to facilitating hundreds of incident reviews and engaging national, state, and local partners for over a decade, some key accomplishments include:

- The MHRC is a proven model for reducing homicides that has been replicated nationally. The National Institute for Justice Evaluation demonstrated that the homicide reviews were associated with a statistically significant reduction in homicides in Milwaukee. In police districts included in the review process, homicides were reduced by 52% compared to 9.2% in control sites.
- The MHRC has embarked on a new type of review called sentinel events with a particular emphasis on geographic areas in the City of Milwaukee that have been identified as areas with high need and low investment.
- MHRC staff were significant contributors to the Project Safe Neighborhoods grant, coordinated by the United States Attorney's Office to help develop suppression strategies focused on chronic violent offenders. As a part of this grant, MHRC staff conducted social network analyses of the chronic violent offenders to better understand and target each offender's social networks.
- Sojourner Family Peace Center (SFPC) began internal homicide reviews on all homicide cases related to domestic violence to refine internal practices and procedures. This has improved SFPC's advocacy and ability to focus on lethality factors and implement a lethality assessment tool.
- The Milwaukee County Offender Reentry Program (MCORP) was created by the Department of Corrections, District Attorney's Office, Public Defender's Office, Milwaukee City Attorney's Office, Milwaukee Police Department, and the Office of the Mayor. MCORP is aimed at decreasing the number of absconders and increasing the number of ex-offenders that successfully reenter Milwaukee.
- The Milwaukee Police Department has implemented biweekly internal shoot reviews to help solve nonfatal shooting cases. The review process is similar to the one developed and used by the MHRC.
- Two ordinances related to nuisance properties and taverns have been passed in collaboration with the City Attorney's Office, the Department of Neighborhood Services, and members of the Common Council. The first ordinance improves surveillance at retail properties that are considered nuisance properties by requiring them to install video surveillance systems. The second ordinance allows law enforcement to target the owners of problem establishments.

A PUBLIC HEALTH APPROACH TO VIOLENCE PREVENTION

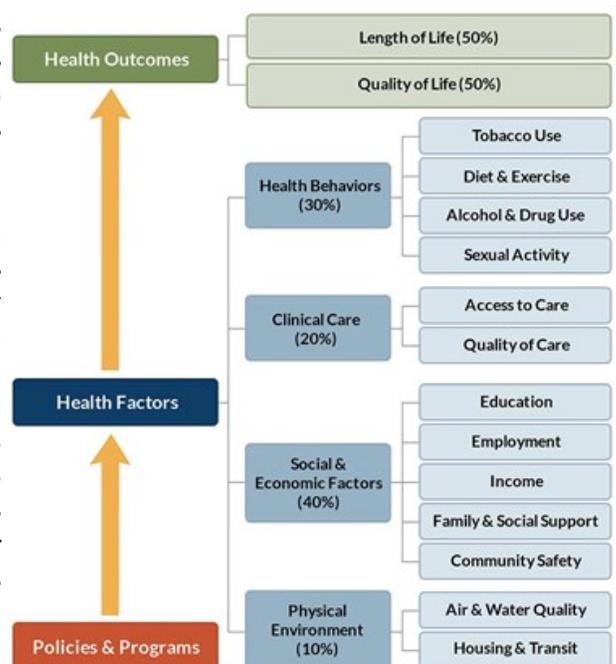

Violence is preventable. Taking a public health approach provides us a process to not only move towards prevention but also to advance health equity.

Underlying and driving the public health model is data. Data are used to help us define the problem to answer questions around the who, what, where, when, and how. Data also help identify risk and protective factors and guide where resources should be allocated. When strategies and recommendations are implemented, data are collected to test effectiveness and impact. Ongoing data collection and analysis are needed even after adoption of effective strategies to continue to monitor and evaluate them. The role of the MHRC as an independent source for data collection and analysis is clearly vital to violence prevention. This function of the MHRC

not only has and will continue to support the upcoming release of the community wide violence prevention plan, led by the City of Milwaukee Health Department’s Office of Violence Prevention, but it also helps to support our community and criminal justice partners’ work.

Foundational to the MHRC’s work is addressing the social determinants of health. According to the County Health Rankings Model, social and economic factors account for 40% of the factors that contribute to individual and population health outcomes. This model emphasizes that multiple factors, if improved, can help make communities healthier places to live, learn, work, and play – and this is true for violence. Within the MHRC’s reviews, in particular the community service provider reviews, the discussions highlight how social and economic context greatly dictates health outcomes and the ability for people, populations, neighborhoods and communities to reach their full potentials. In the context of violence, review participants evaluate how some individuals and communities are unfairly disadvantaged while others are unfairly advantaged. The MHRC provides a forum for these critical conversations to be held and inform prevention strategies and recommendations.

County Health Rankings model © 2014 USPHH

METHODOLOGY AND DEFINITIONS

Since its inception, the MHRC has maintained a database that tracks homicides and nonfatal shootings in the City of Milwaukee. Historically, guidelines similar to the National Violent Death Reporting System were followed. Data were abstracted from the Milwaukee Police Department and then coded according to the NVDRS protocol. However, in 2016, access to the data on homicides and nonfatal shootings was restricted and, thus, MHRC was not able to independently verify, validate, or interpret the data provided by MPD. Because the data collection methodology changed in 2016, for variables that require an interpretation or additional review, such as primary factor, the MHRC does not recommend making comparisons between 2016 and previous years.

According to the FBI's Uniform Crime Reporting Program, a **criminal homicide** is defined under two categories:

1. Murder and nonnegligent manslaughter—the willful (nonnegligent) killing of one human being by another.
2. Manslaughter by negligence—the killing of another person through gross negligence.

The data reported in this report include homicides that meet the UCR definition. Incidents that do not meet the above criteria include self-defense and officer-involved cases. In addition, for the purposes of this report, the date of incident is used to count a homicide.

A **nonfatal shooting** is defined as an injury as a result of a firearm that does not cause death. The date of incident and victim information are used to count nonfatal shootings.

Several statistics are included in this report.

1. Frequency—the number of times a data value (e.g. homicide) occurs.
2. Homicide rate—the rate at which homicides occur in a population.
3. Nonfatal shooting rate—the rate at which nonfatal shootings occur in a population.
4. Relative risk—risk of a disease (e.g. homicide) in one group relative to another.

Executive Summary

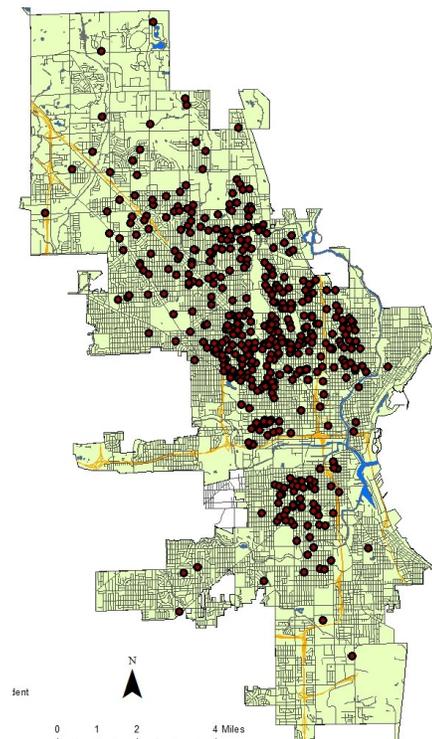

Key data points for 2016:

- The homicide rate for the City of Milwaukee in 2016 was 23.2 per 100,000 population.
- Milwaukee recorded 139 homicides and 555 nonfatal shooting victims in 2016 based on date of injury.
- When the data are represented by age, gender, and race, both homicide and nonfatal shooting rates are highest among males and people of color.
- The ZIP code, 53206, had the highest homicide and nonfatal shooting rate in 2016, which is similar to previous years.
- The neighborhood, Old North Milwaukee, experienced the highest frequency of assaults and nonfatal shootings in 2016.
- In 2016, Harambee had the highest frequency of homicides at 10.

VIOLENCE IN MILWAUKEE, 2016

Figure 1. Firearm Homicide and Nonfatal Shooting Victims, 2006-2016

Combined Firearm Homicide and Non-Fatal Shooting Victims by Year

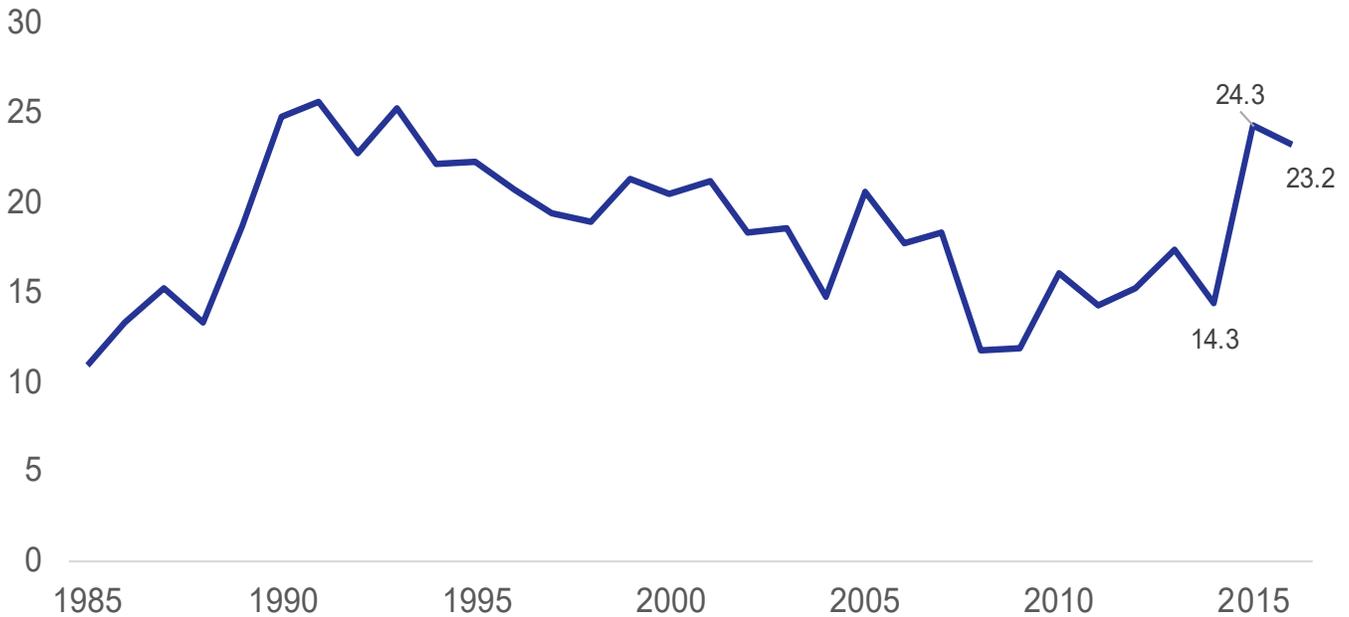

Data Source: MHRC, 2006-2015; MPD, 2016

Milwaukee recorded **139 homicides and 555 nonfatal shooting victims in 2016**. In Figure 1, comparing 2006 to 2016, there has been a 51% increase in firearm-related homicide victims, an 11% decrease in nonfatal shooting victims, and a 4% decrease in combined victims.

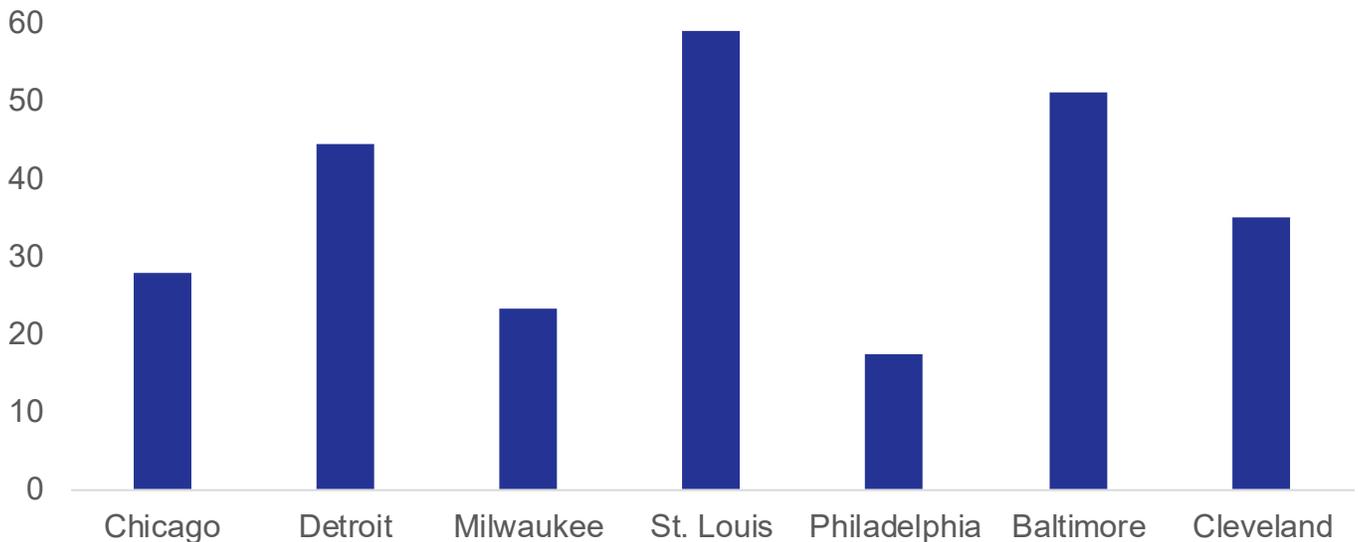

Figure 2 shows homicide rates from 1985 to 2016 in the City of Milwaukee. Homicide rates peaked in the early 1990s, and continued to have a downward trend through 2014. The homicide rate in 2015 was 24.3 per 100,000 compared to **23.2 per 100,000 in 2016**. The 2016 state of Wisconsin homicide rate was 3.0 per 100,000.

Figure 2. Homicide Rate per 100,000 in Milwaukee, 1985-2016

Data Source: FBI UCR, 1985-2014; MHRC, 2015; MPD, 2016

Figure 3. Homicide Rate per 100,000 Comparison across Selected Cities, 2016

Data Source: [U.S. Cities Experienced Another Big Rise in Murder in 2016](#); MPD, 2016

Figure 3 shows the homicide rate for the City of Milwaukee compared to selected cities with similar social and economic characteristics. Milwaukee ranks 6th among these seven cities. However, all cities have higher rates than the national rate.

Table 1. Weapon Type for Homicides, 2016

Weapon Type	Count
Arson	1
Asphyx./Strang.	1
Blunt Inst	2
Bodily Force	4
Firearm, unknown	8
Handgun	101
Knife/Edge Weapon	13
Long gun	7
Other	1
Unknown	1

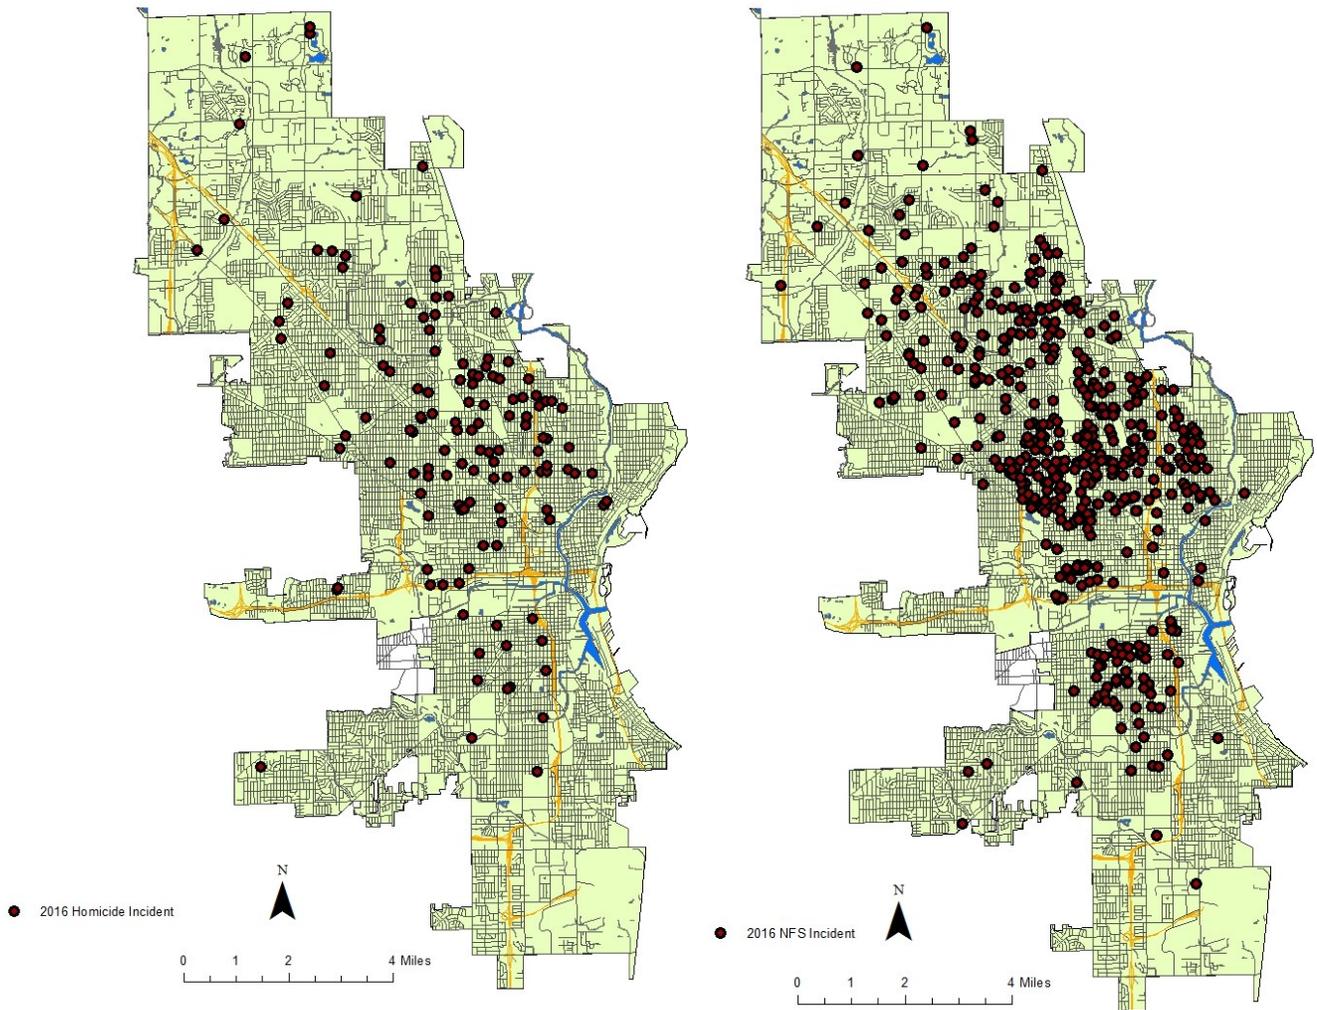

Table 2. Weapon Type for Nonfatal Shootings, 2016

Weapon Type	Count
Firearm, unknown	57
Handgun	430
Long gun	8

There were 116 (83.5%) firearm homicides in 2016. Of the nonfatal shootings that occurred in 2016, 430 occurred with a handgun.

Figure 4 shows the location of each homicide and nonfatal shooting that occurred within the City of Milwaukee in 2016. While the number of homicides and nonfatal shootings differ, the maps indicate that the location and concentration of each act of violence occur in similar parts of the City.

Figure 4. Homicide (left) and Nonfatal Shooting (right) Location in the City of Milwaukee, 2016

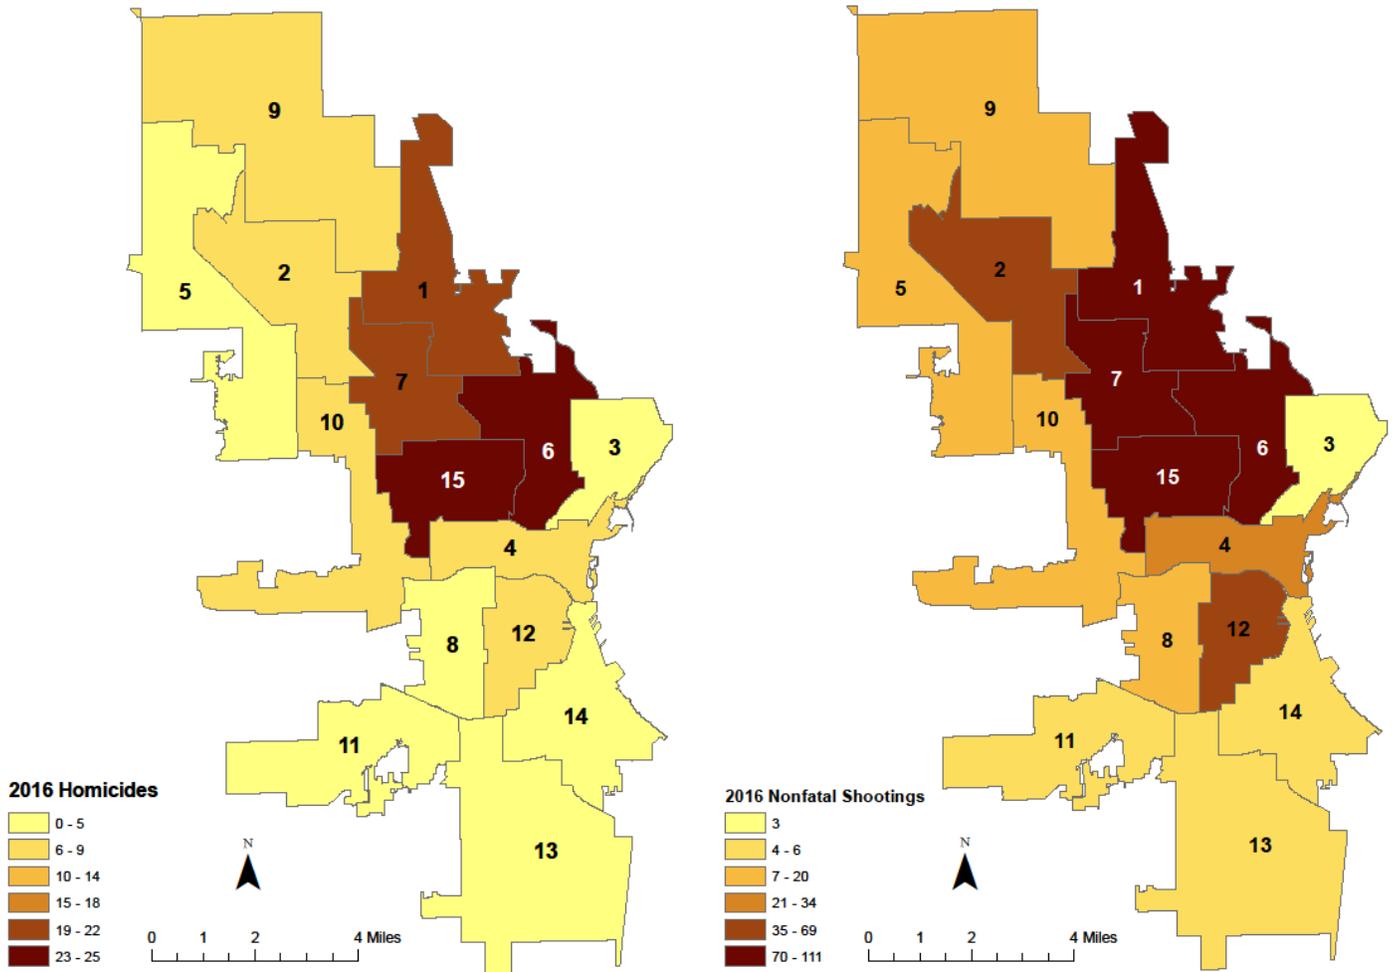

Data Source: MPD, 2016

Data Source: MPD, 2016

Figure 5 shows the frequency of homicides and nonfatal shootings by each aldermanic district in the City of Milwaukee. Aldermanic districts 1, 6, 7, and 15 experienced the highest frequency of both nonfatal shootings and homicides.

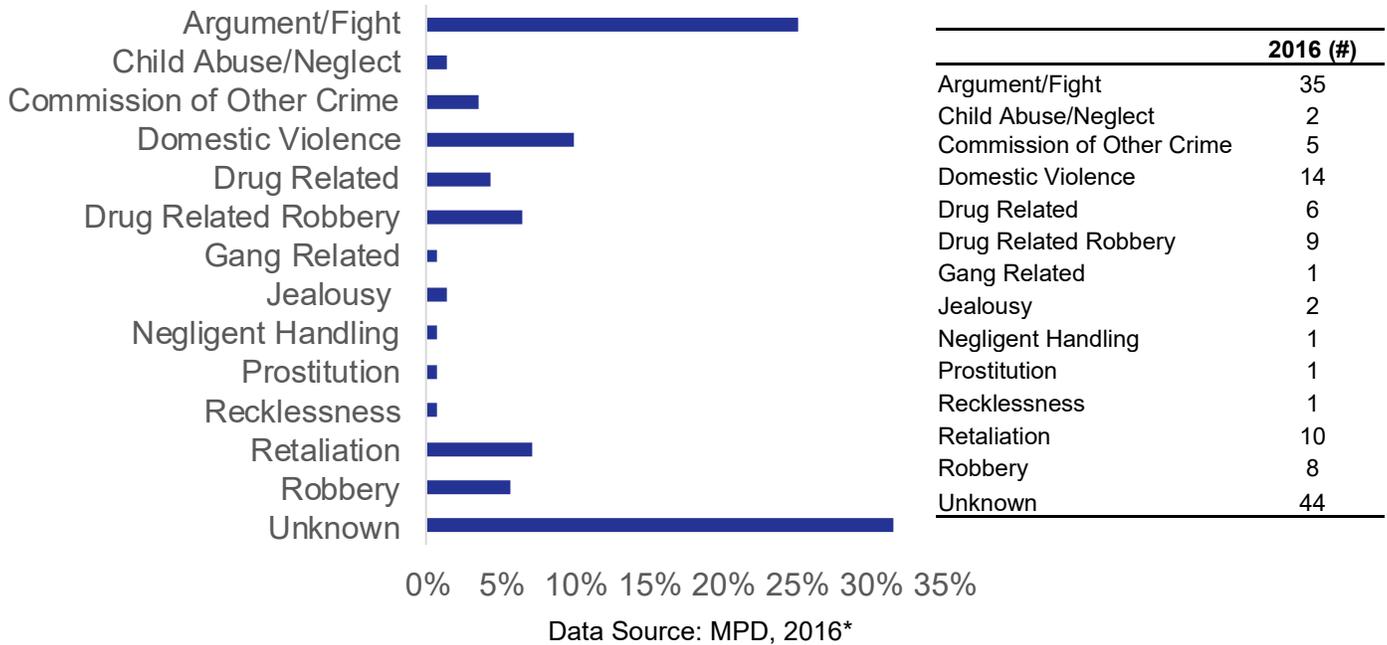

Figure 5. Homicide (left) and Nonfatal Shooting (right) Frequency by Aldermanic District in the City of Milwaukee, 2016

Data Source: MPD, 2016

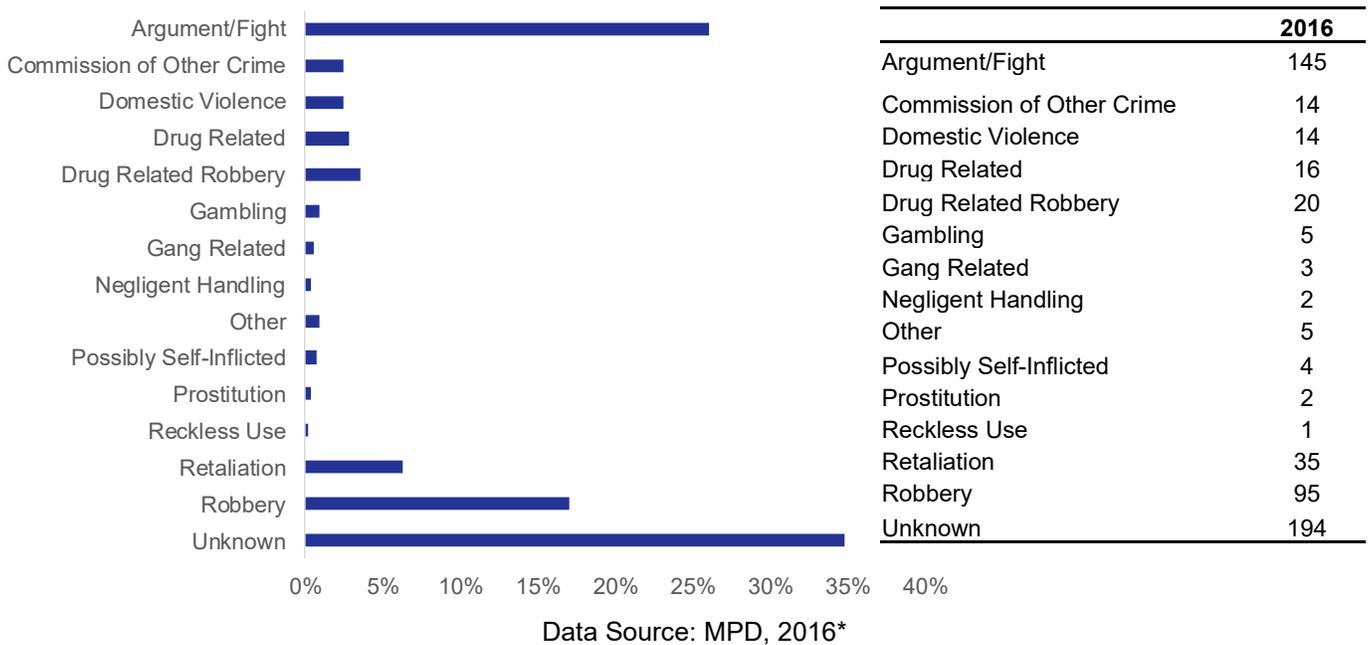

Data Source: MPD, 2016

Figure 6. Primary Factor of Homicides, 2016

***Note: MHRC methodology was not applied to 2016 data. The primary factors are based on MPD interpretation.**

Figure 7. Primary Factor of Nonfatal Shootings, 2016

***Note: MHRC methodology was not applied to 2016 data. The primary factors are based on MPD interpretation.**

In 2016, there were over 30% of homicide and nonfatal shooting cases with unknown primary factor. Argument/fight followed as the next leading driver of both homicides and nonfatal shootings.

Table 3. Primary Factor of Homicides, 2014-2015

	2014	2015
Argument/Fight	25	44
Child Abuse/Neglect	2	3
Commission of Other Crime	2	0
Domestic Violence	6	12

Possibly Self-Inflicted	5	5
Prostitution	0	0
Reckless Use	0	0
Retaliation	42	81
Robbery	112	126
Unknown	179	154

Data Source: MHRC, 2014-2015

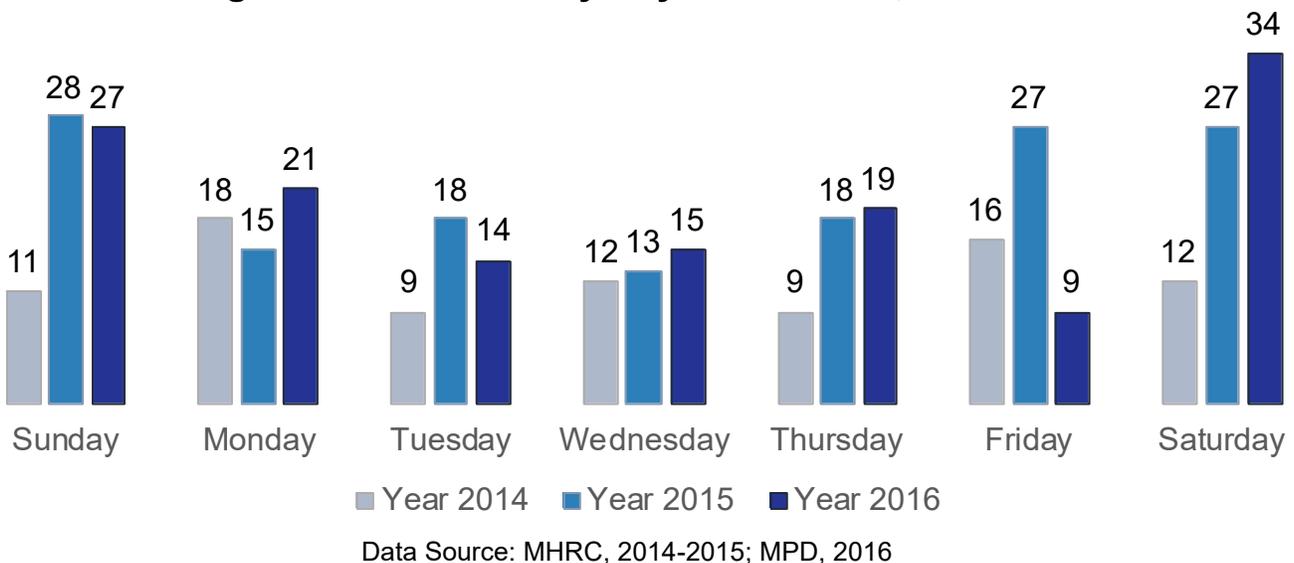

In 2014, the leading primary factor of homicides was argument/fight, followed by unknown and retaliation. In 2015, the leading primary factor of homicides was argument/fight, followed by retaliation and unknown. For nonfatal shootings, the leading primary factor in both 2014 and 2015 was unknown followed by argument/fight and robbery.

Figure 8. Homicides by Month, 2014-2016

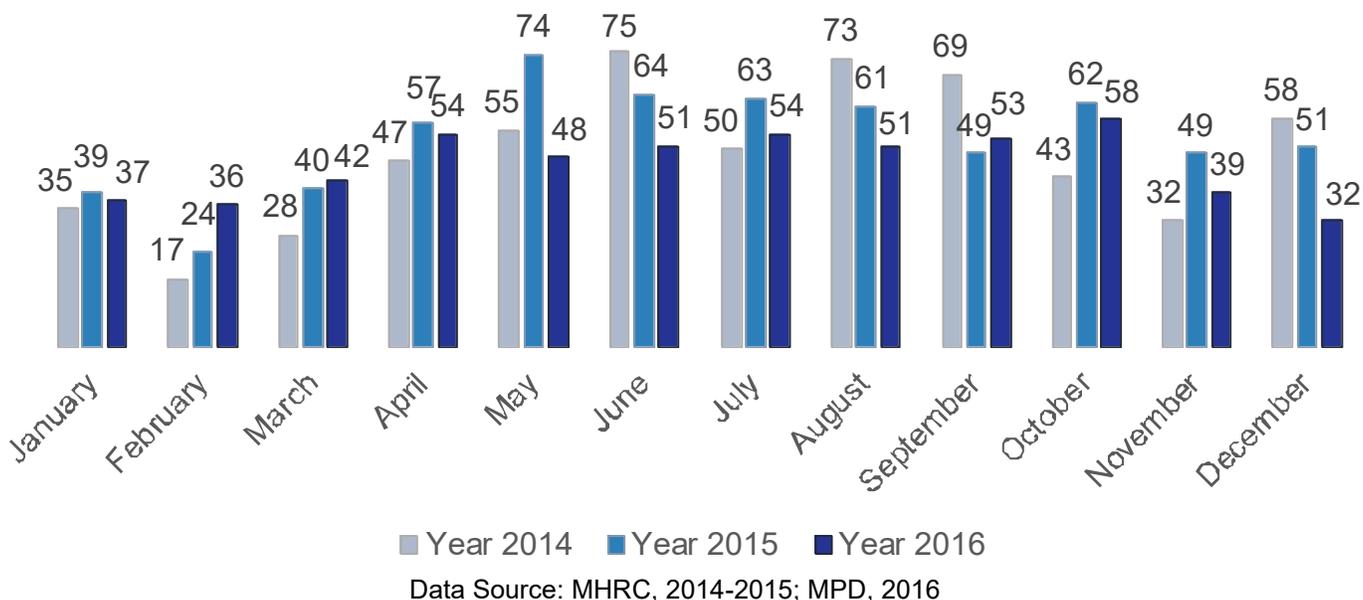

In 2016, the City of Milwaukee tallied 139 homicides, which is a 5% decrease from 2015 (n=146 homicides) but a 60% increase compared to 2014 (n=87). By month, there was an increase in homicides during March (56%), June (8%), August (130%), October (69%), and December (75%) compared to 2015.

Figure 9. Homicides by Day of the Week, 2014-2016

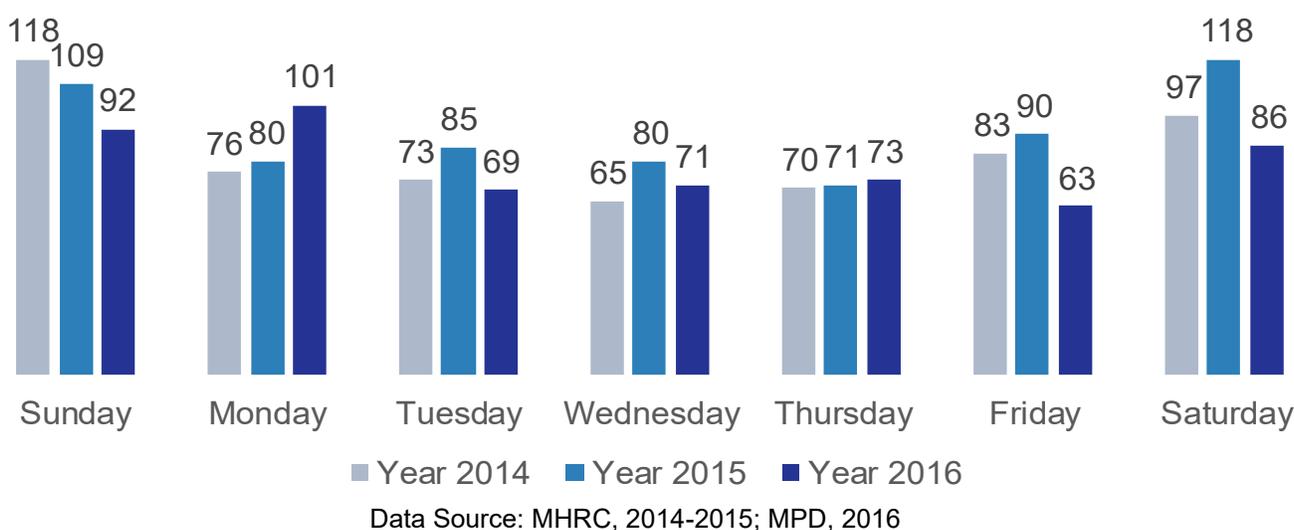

In 2016, 50% of homicides occurred on Friday, Saturday, or Sunday, compared to 56% of homicides in 2015. However, there was a decrease by 67% in homicides that happened on Friday, compared to 2015.

Figure 10. Nonfatal Shootings by Month, 2014-2016

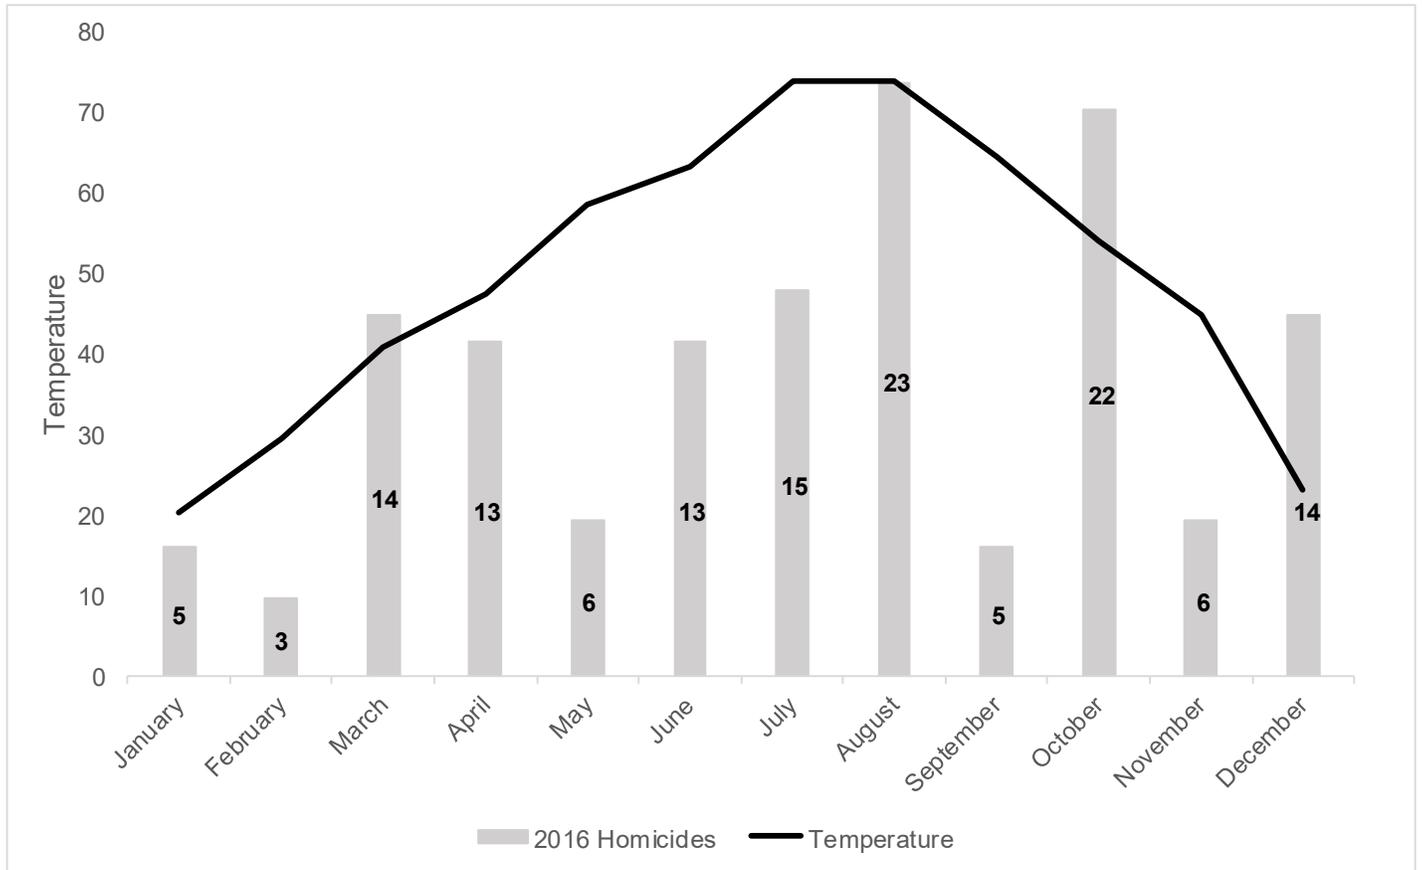

In 2016, there were 498 nonfatal shooting incidents and 555 nonfatal shooting victims. Compared to 2015, there was a decrease by 5% in nonfatal shooting incidents and 12% in nonfatal shooting victims. With the exception of February, March, and September, there was a decrease in the number of nonfatal shooting victims in the remaining months. While August had a 130% increase in homicides compared to 2015, there was a 16% decrease in the nonfatal shooting victims.

Figure 11. Nonfatal Shootings by Day of the Week, 2014-2016

In 2016, 43% of all nonfatal shooting victims were shot on a Friday, Saturday or Sunday. There was an increase by 26% in nonfatal shooting victims on Mondays.

Figure 12. Monthly Homicide Total and Temperature, 2016

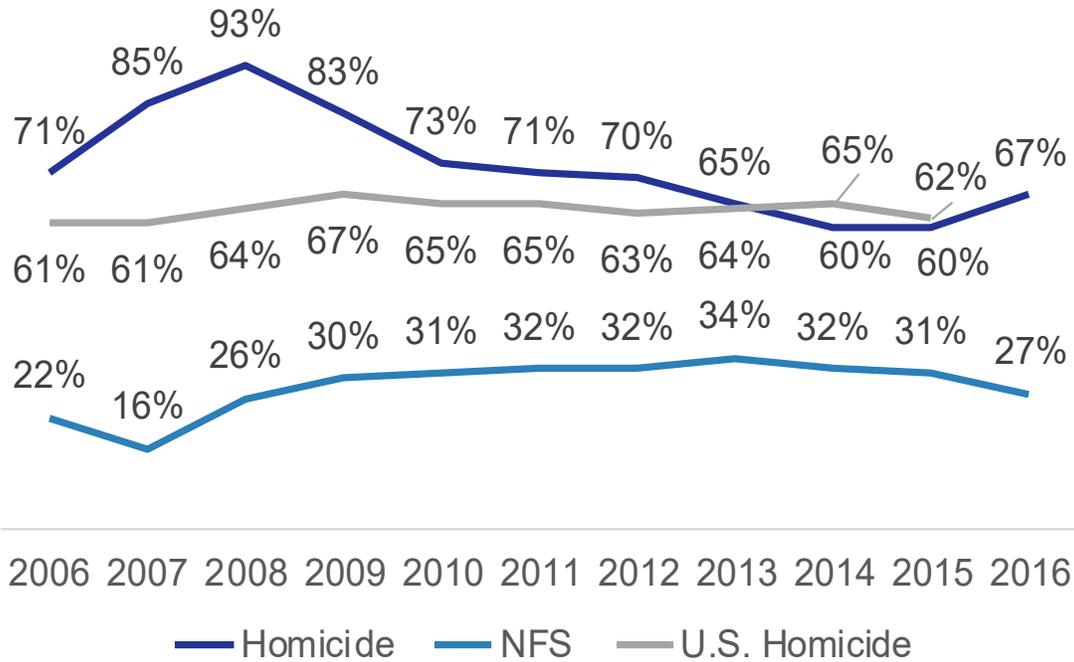

Data Source: MPD, 2016

Figure 12 visualizes the average temperature (calculated using temperatures on dates of homicides) compared to the number of homicides per month. It is perceived that warmer temperatures lead to more crime and cooler or inclement weather leads to less crime. However, this is not the pattern seen in 2016 data for Milwaukee. While August had the highest number of homicides and average temperature, October had the second highest number of homicides in the year but the average temperature was 54 degrees.

The 2016 homicide clearance rate was 67% and the nonfatal shooting clearance rate was 27%. In 2016, 68% of homicide cases and 41% of nonfatal shooting cases were referred to the District Attorney's office.

Figure 13. Clearance Rate, 2006-2016

Data Source: MPD, 2006-2016

Case Fatality Rate

According to the Centers for Disease Control and Prevention, the case fatality rate is a measure of the severity of the condition. It tells us the proportion of people who die from a particular disease.

Researchers have stratified firearm injury data to calculate case fatality rate by unintentional, assault-related, or self-inflicted. In the 2015 MHRC Annual Report, case fatality rate was calculated for assault-related firearm injury only. However, given the change in methodology for data collection and validation in 2016, the current analysis includes all firearm injury cases to calculate a total case fatality rate.

The total case fatality rate for firearm injury in the City of Milwaukee is 18.3%, which means that 18.3% of all firearm related injuries resulted in death.

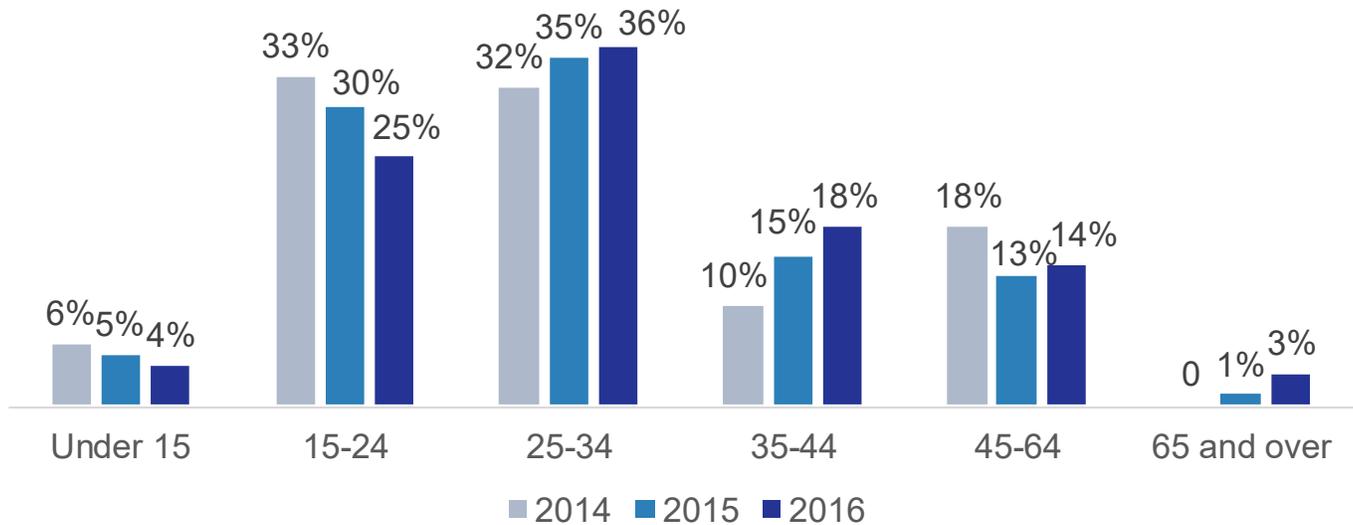

VICTIM AND SUSPECT DEMOGRAPHICS AND CHARACTERISTICS

In 2016, over one third of homicide victims were 25 to 34 years old. The average age of the homicide victims was 32 years old and the median age was 31 years old. Six percent of all homicide victims were youth (ages 17 and under). Eighty two percent of all homicide victims were male.

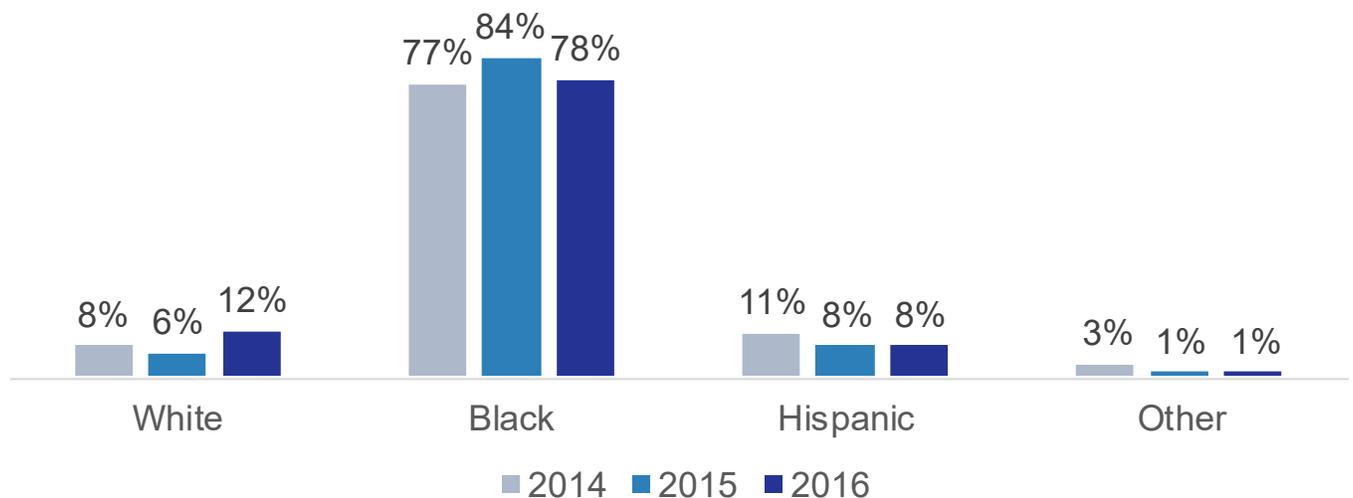

Figure 14. Homicide Victims by Age, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

Nearly 80% of homicide victims in the City of Milwaukee in 2016 were Black and yet make up about 40% of the City's total population. To compare, Whites make up a similar percent of the total City population but represent 12% of homicide victims, which is an increase from both 2014 and 2015.

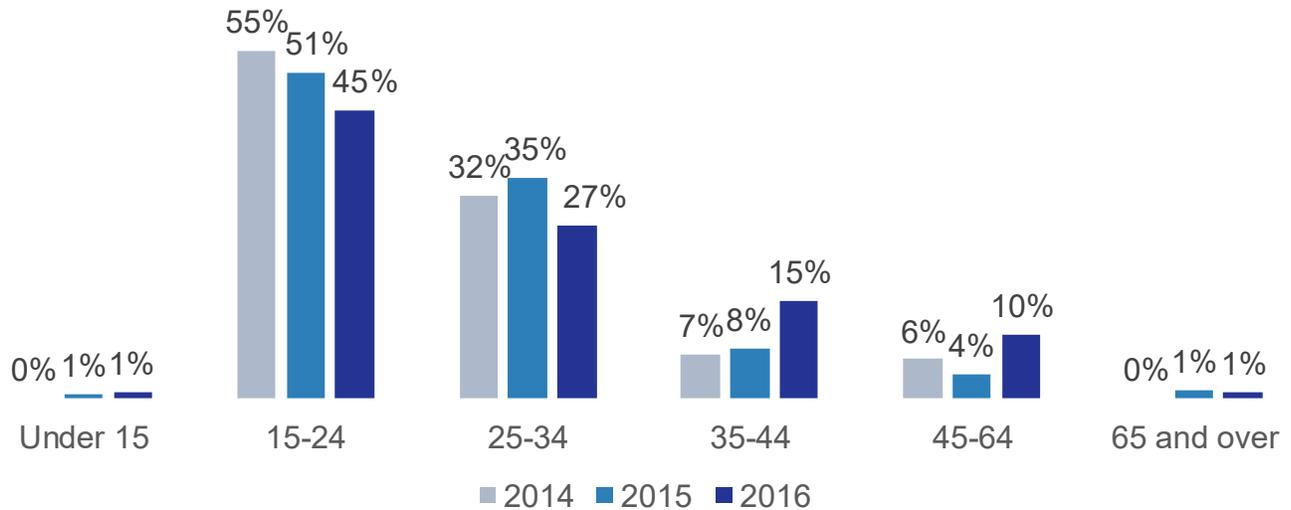

Figure 15. Homicide Victims by Race, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

In 2016, over 70% of homicide suspects were 15 to 34 years old. There was a noticeable increase in homicide suspects, ages 35-64 years. The average age of the homicide suspects was 29 years old and the median age was 27 years old. Three percent of all homicide suspects were youth (ages 17 and under). Eighty four percent of all homicide suspects were male.

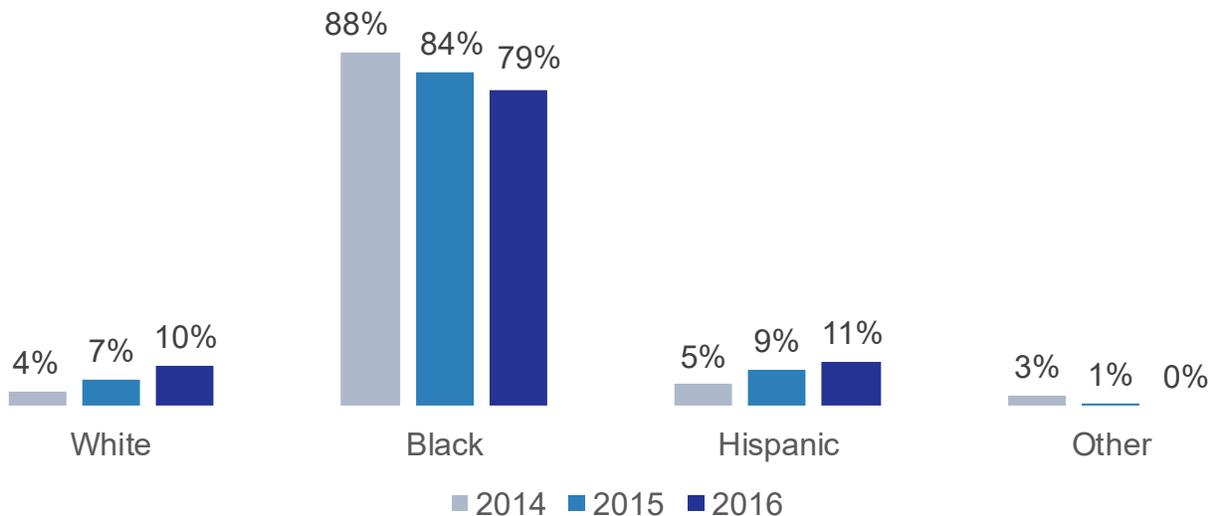

Figure 16. Homicide Suspects by Age, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

Similar to homicides victims, nearly 80% of homicide suspects in the City of Milwaukee in 2016 were Black, 10% were White, and 11% were Hispanic.

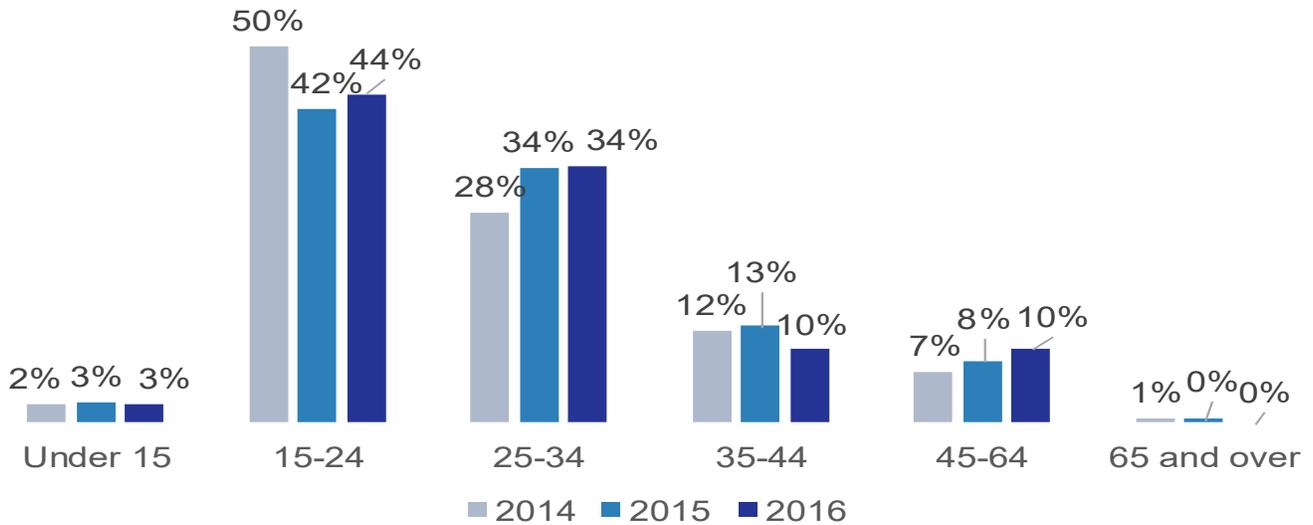

Figure 17. Homicide Suspects by Race, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

In 2016, nearly 80% of nonfatal shooting victims were 15 to 34 years old. The average age of the nonfatal shooting victims was 28 years old and the median age was 25 years old. Nine percent of all nonfatal shooting victims were youth (ages 17 and under). Almost 90% of nonfatal shooting victims were male.

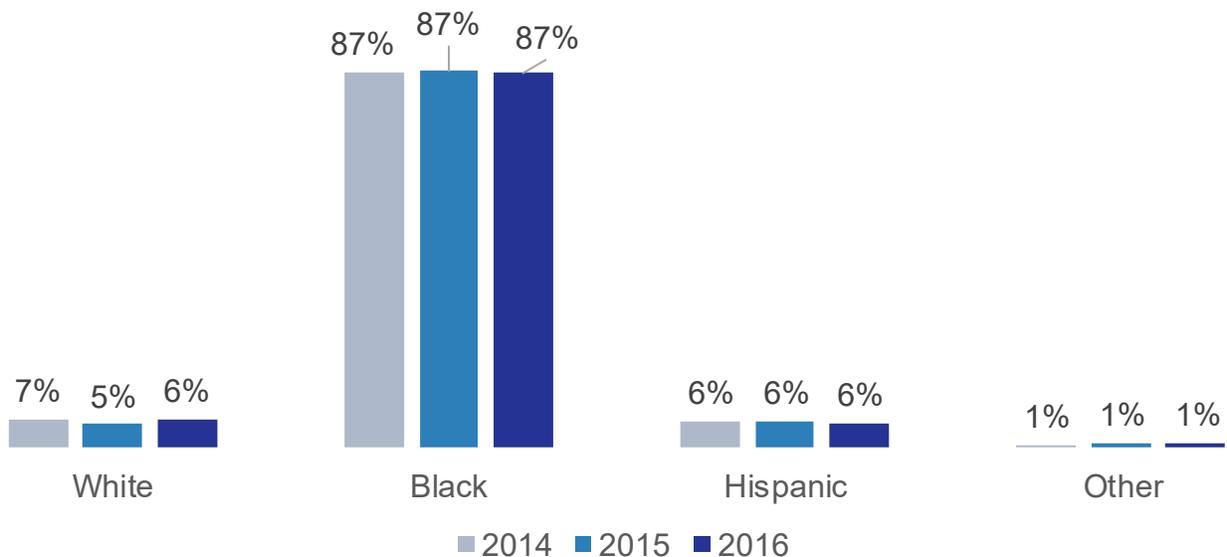

Figure 18. Nonfatal Shooting Victims by Age, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

In each year from 2014-2016, 87% of nonfatal shooting victims in the City of Milwaukee were Black. To compare, Whites and Hispanics each represent, on average, 6% of nonfatal shooting victims across the same timeframe.

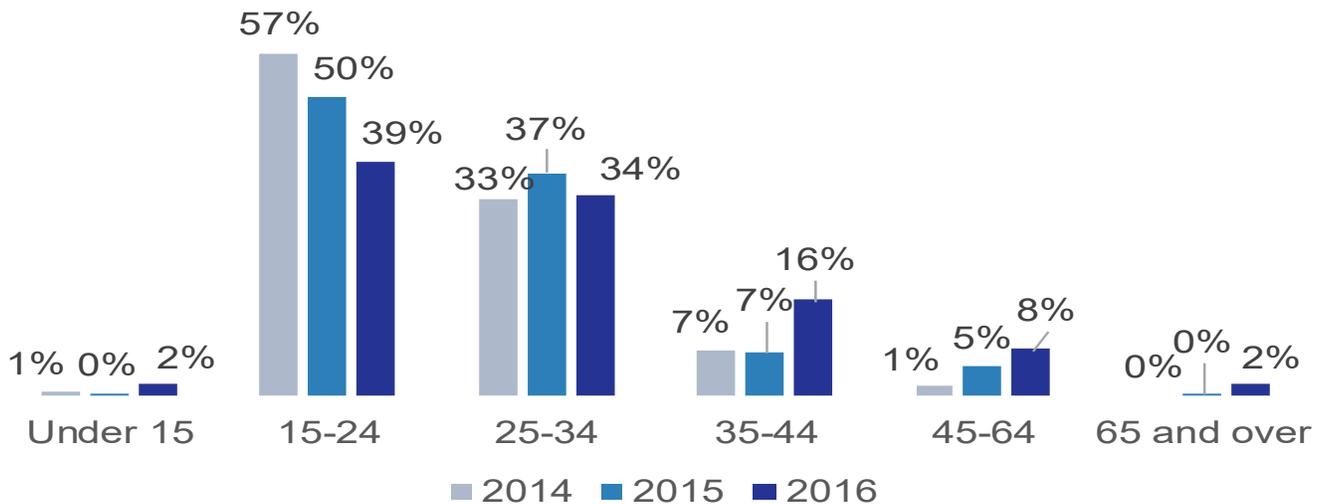

Figure 19. Nonfatal Shooting Victims by Race, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

In 2016, 39% of nonfatal shooting suspects were 15-24 years old. There was an increase in homicide suspects, ages 35-44 years. The average age of the nonfatal shooting suspects was 29 years old and the median age was 26 years old. Eight percent of all nonfatal shooting suspects were youth (ages 17 and under). Almost 90% of nonfatal shooting suspects were male.

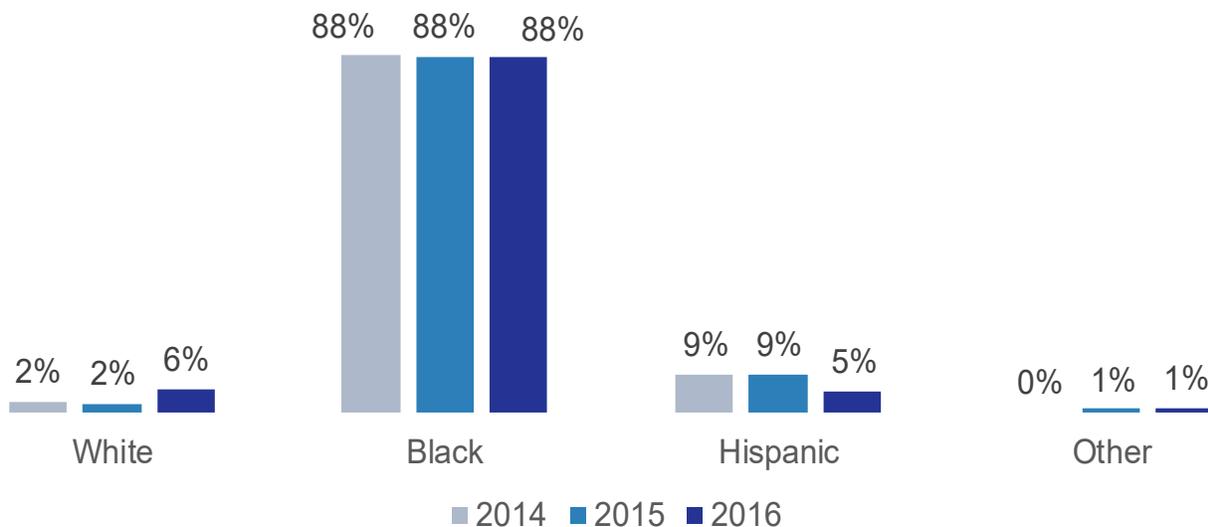

Figure 20. Nonfatal Shooting Suspects by Age, 2014-2016

Data Source: MHRC, 2014-2015; MPD, 2016

In each year from 2014-2016, 88% of nonfatal shooting suspects in the City of Milwaukee were Black. In 2016, 6% of suspects were White while 5% were Hispanic.

Figure 21. Nonfatal Shooting Suspects by Race, 2014-2016

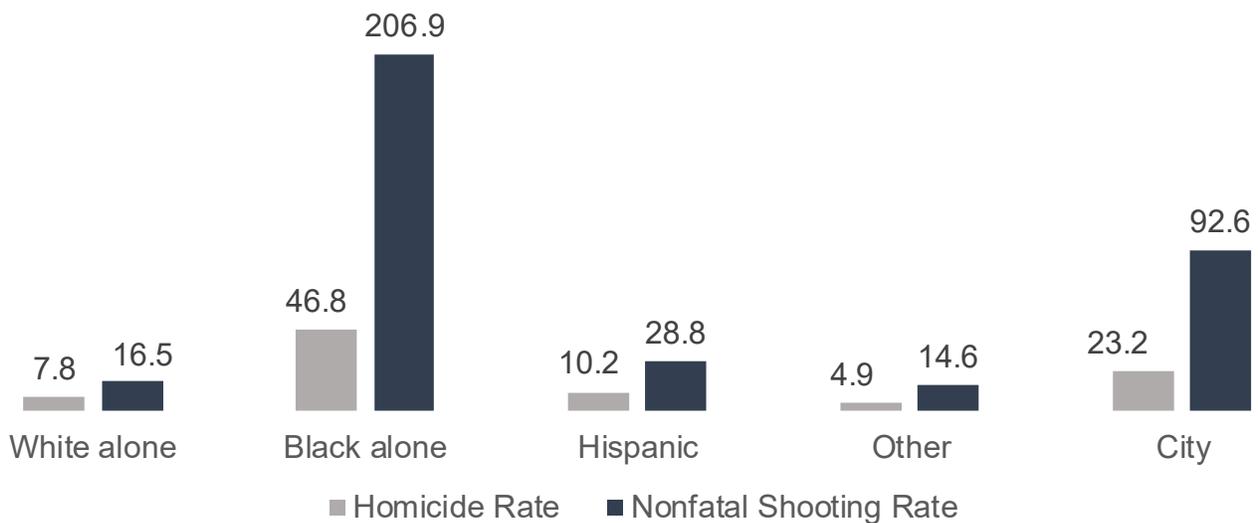

Data Source: MHRC, 2014-2015; MPD, 2016

Figure 21 depicts homicide and nonfatal shooting victimization rates by race and ethnicity. Figures 22-25 further distinguishes homicide and nonfatal shooting victimization rates by age and race and ethnicity.

Key findings:

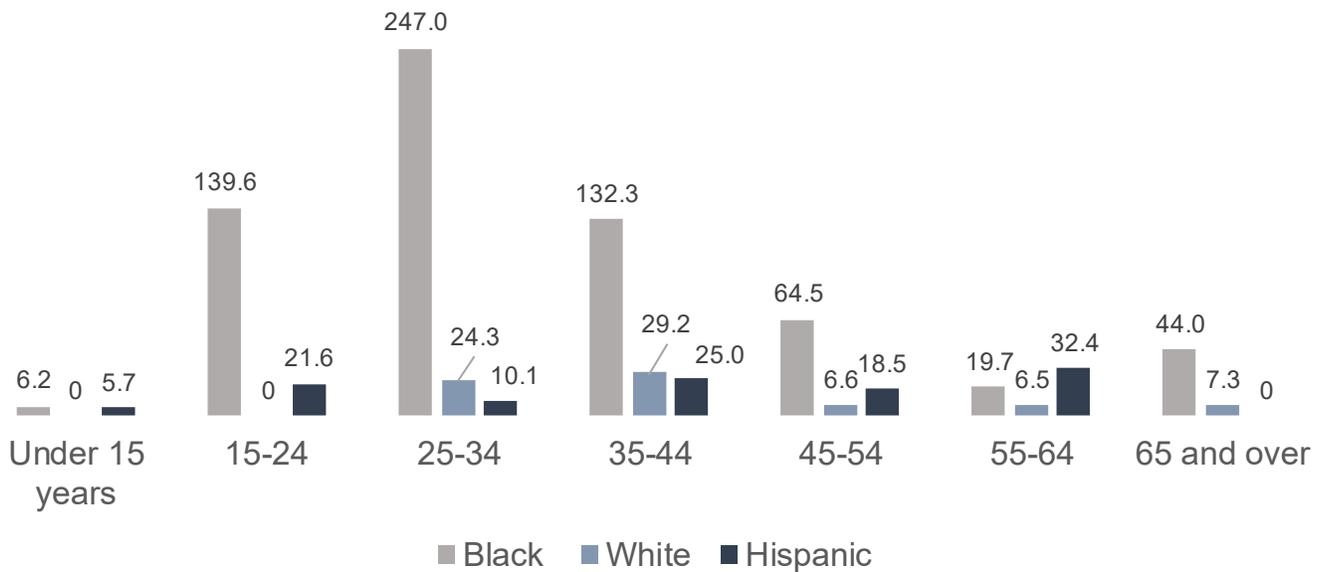

- Both the homicide and nonfatal shooting victimization rates of the Black population are more than two times that of the City rate.
- Black males, ages 15-24 years, are 16 times more likely to be a nonfatal shooting victim compared to White males, ages 15-24 years.
- Black males, ages 25-34 years, are 10 times more likely to be a victim of homicide and 17 times more likely to be a nonfatal shooting victim compared to their White counterparts.
- Black females, ages 25-34 years, are nine times more likely to be a nonfatal shooting victim compared to White females, ages 25-34 years.
- Hispanic females, ages 45-54 years, are almost three times more likely to be a victim of homicide or a nonfatal shooting victim compared to White females, ages 45-54 years.
- Both Hispanic males and females, ages 55-64 years, are five times more likely to be a homicide victim compared to White males and females, ages 55-64 years, respectively.

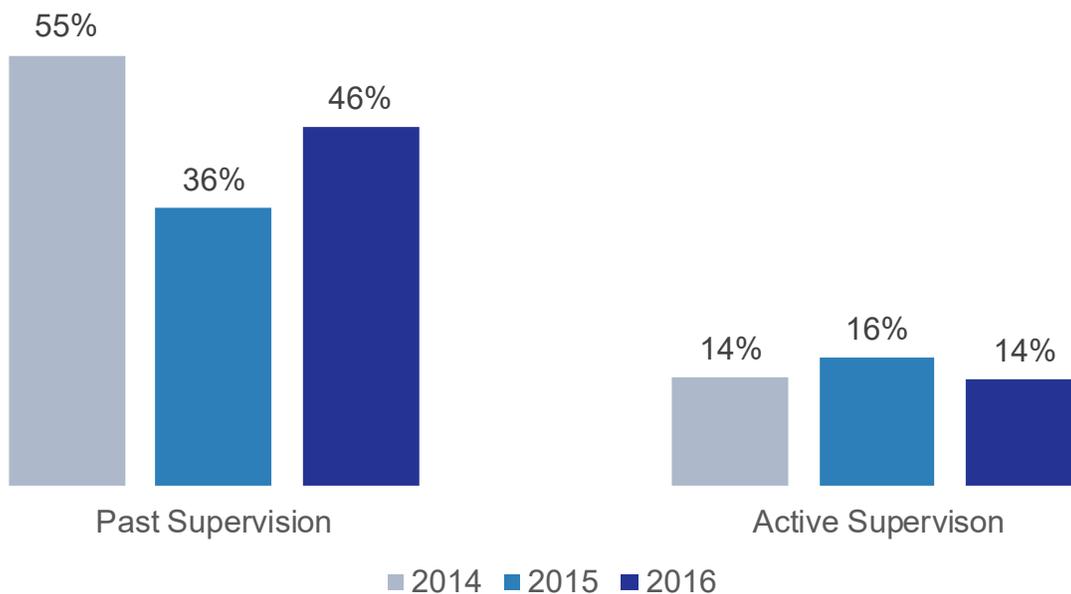

Figure 26. Female Nonfatal Shooting Rate per 100,000 by Age and Race/Ethnicity, 2016

Data Source: MPD, 2016

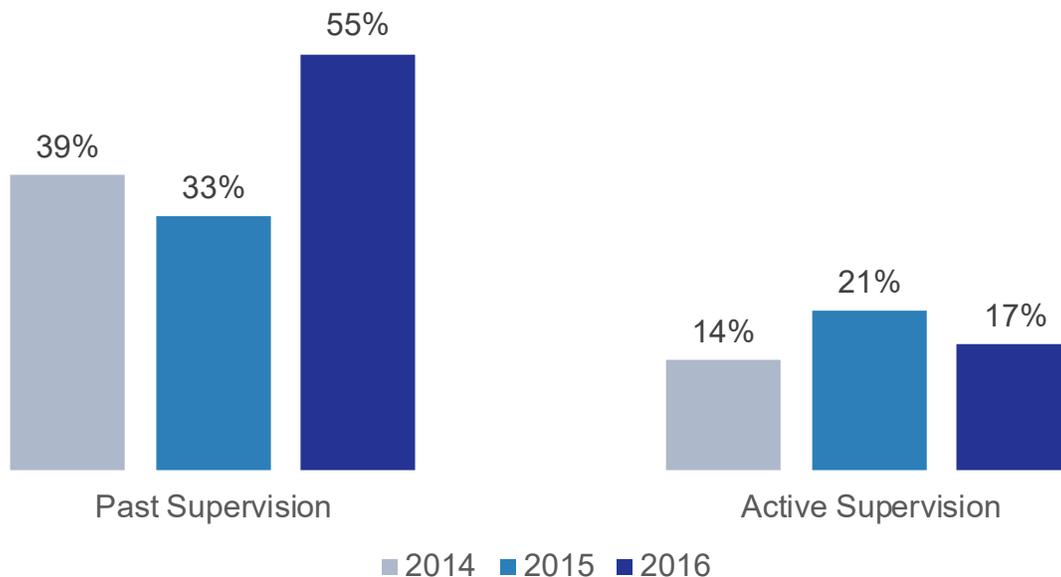

Figure 26 and 27 describe the adult supervision status of homicide victims and suspects at the time of the homicide incident date. In 2016, 46% of homicide victims had a history of supervision compared to 55% of homicide suspects. 14% of homicide victims were on active supervision compared to 17% of homicide suspects at the time of the incident.

VIOLENCE BY ZIP CODE

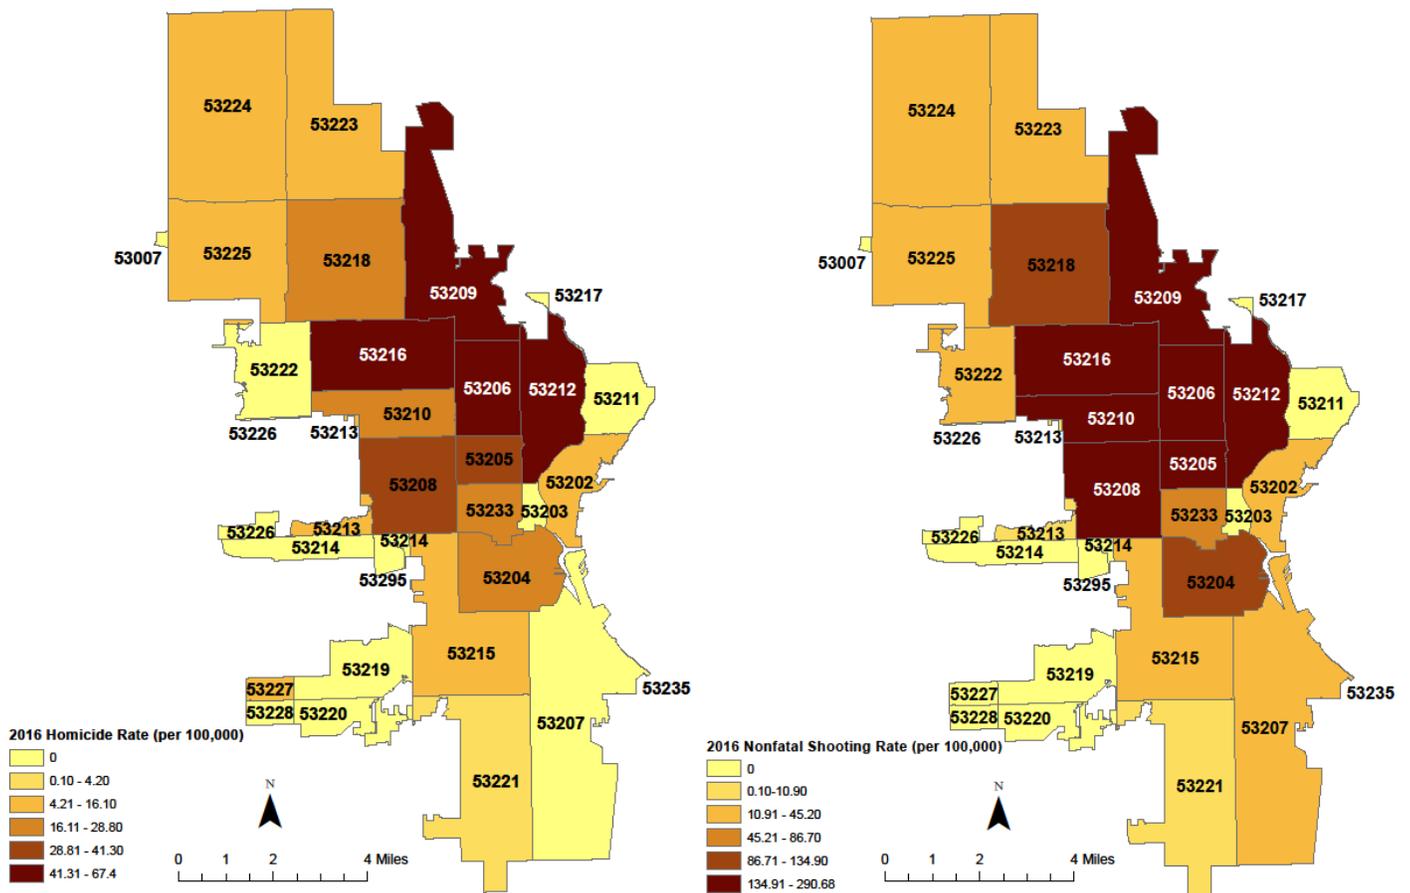

The relationship between how people experience their environments and the impact of those same environments on health outcomes is critical to the distribution of violence. Socioeconomic status (SES) is a measure of a person’s social and economic standing in relation to others. SES, for this report, is based on income and education and was determined using the Milwaukee Health Report’s methodology.

Figure 28 shows the rates of homicides and nonfatal shootings in ZIP codes in the City of Milwaukee. Table 3 adds information such as median income and unemployment rate of the ZIP codes. Note: Some ZIP codes encompass areas outside of the City of Milwaukee’s boundaries.

Key findings:

- The ZIP code, 53206, had both the highest homicide and nonfatal shooting rate in 2016.
- ZIP codes with higher percentages of individuals below the poverty level and unemployment rates also had higher rates of homicide and nonfatal shooting in 2016.

Figure 29. Homicide (left) and Nonfatal Shooting (right) Rate per 100,000 in the City of Milwaukee, 2016

VIOLENCE BY NEIGHBORHOOD

The influence of a person's environment on their health and the opportunities and challenges presented in those spaces are profound. Efforts across the City of Milwaukee, including the City of Milwaukee Health Department Office of Violence Prevention's community wide plan, focus on the neighborhood level. Similar to ZIP codes, neighborhoods are geographic boundaries that can help elucidate the prevalence or incidence of health concerns, such as violence.

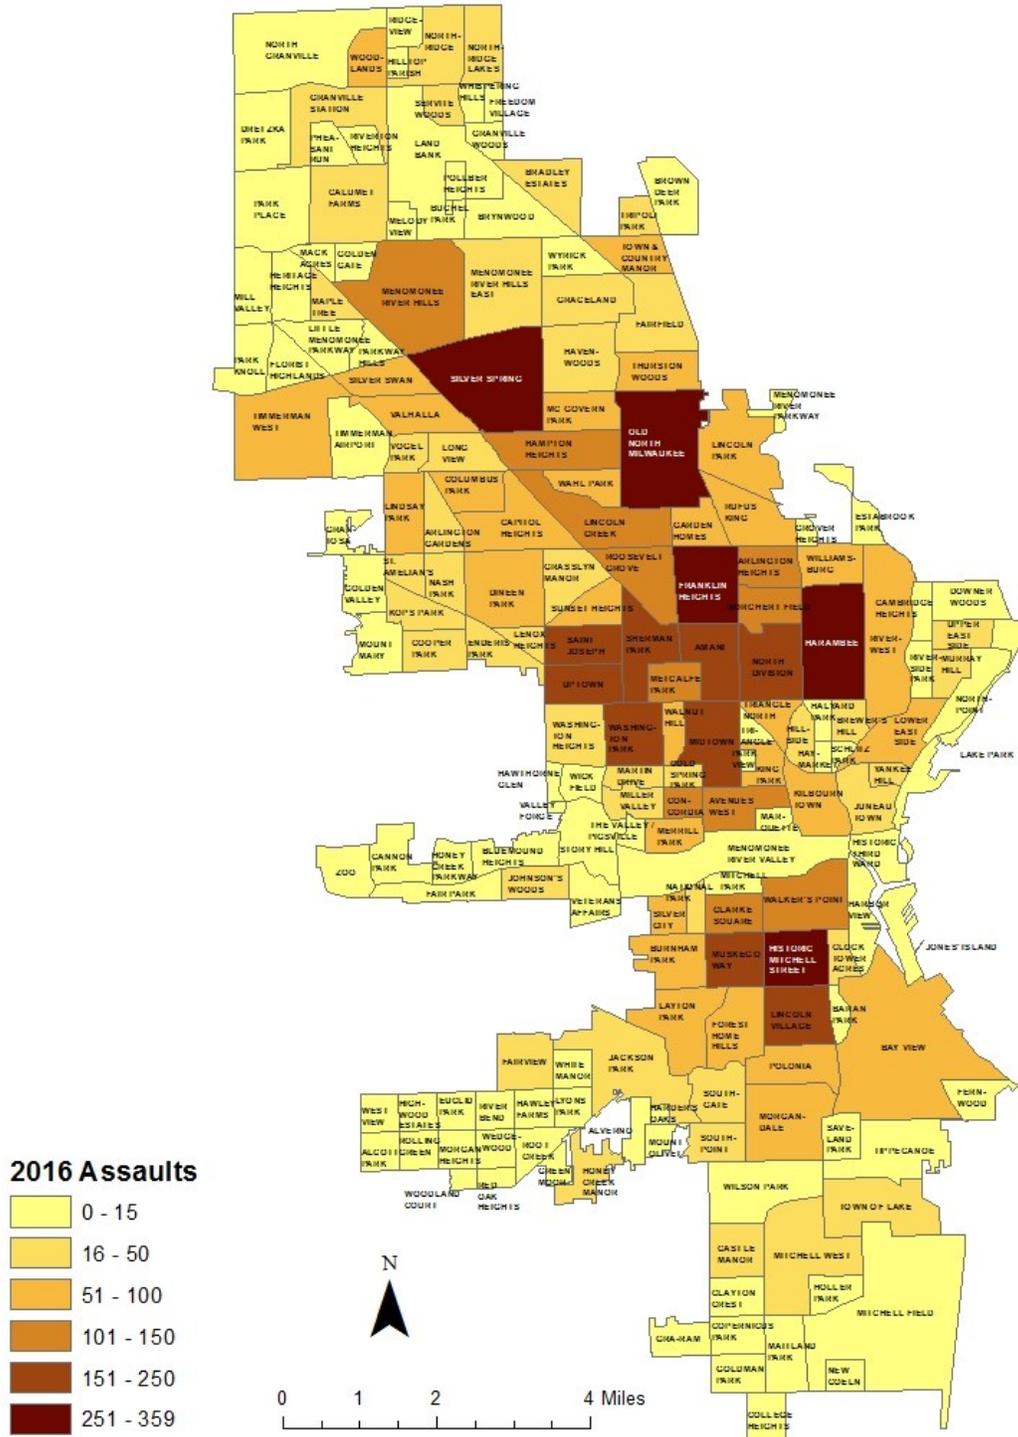

Figures 29-31 are maps that describe the assault, nonfatal shooting, and homicide frequency by neighborhood in 2016. Tables 4-6 list the 10 neighborhoods with the highest frequency of assaults, nonfatal shootings, and homicides, respectively.

Figures 32-34 are maps that describe the assault, nonfatal shooting, and homicide frequency by neighborhood from 2014 to 2016. Tables 7-9 list the 10 neighborhoods with the highest frequency of assaults, nonfatal shootings, and homicides, respectively.

Key findings:

- Assaults
 - Old North Milwaukee had the highest frequency of assaults both in 2016 and across 2014 to 2016.
 - Other areas with high frequencies of assaults in this timeframe, include: Franklin Heights, Harambee, and Silver Spring.
- Nonfatal Shootings
 - Similar to assaults, Old North Milwaukee had the highest frequency of nonfatal shootings both in 2016 and from 2014 to 2016.
 - Additional neighborhoods with high frequencies of nonfatal shootings in this timeframe, include: Amani, Franklin Heights, Harambee, and Sherman Park.
- Homicides
 - In 2016, Harambee experienced the highest frequency of homicides at 10, followed by Franklin Heights with nine, and Sherman Park with eight.
 - From 2014 to 2016, Franklin Heights had 24 homicides, Harambee had 23, and Old North Milwaukee had 19.
